

What charge do Neutrons have?

When a reaction requires energy to complete it is called what?

What is the name of a substance made of atoms which all contain the same number of protons (P+).

How many electrons can the first orbit hold?

How many electrons can the Second orbit hold?

How many electrons are in the outer orbit of:

7 14.007

N

Nitrogen

How many electrons are in the outer orbit of:

17 35.453

Cl

Chlorine

How many electrons are in the outer orbit of:

3 6.941

Li

Lithium

How many Neutrons are in the Nucleus of:

3 6.941

Li

Lithium

What number is the atomic mass of the element below:

7 14.007

N

Nitrogen

Endothermic

None they are Neutral

2

Element

5

8

1

7

14.007
